

ISO 14064 Greenhouse Gas (GHG) Carbon Footprint Reduction Lead Auditors' Training Course

Program Overview

Climate change and its effects are starting to be a BIG global concern, being the biggest threat. In response to this, government and private industries are setting target related to *Greenhouse Gas (GHG) Reduction*, or more commonly known as *Carbon Footprint Reduction*. ISO 14064 is an international greenhouse gas accounting and verification standard which serves as solutions to account for GHG emissions and removals of the lack of clarity and consistency between them all.

ISO 14064 has resulted from several years of detailed study and engagement with the international community of governmental and business organizations with a stake in climate change. ISO 14064 Objectives are to:

- Enhance environmental integrity by promoting consistency, transparency, and credibility, in GHG quantification, monitoring, reporting and verification;
- Enable organizations to identify and manage GHG related liabilities, assets and risks;
- Facilitate the trade of GHG allowances of credits; and
- Support the design, development and implementation of comparable and consistent GHG schemes or programmes.
